Accessibility

Series 40: Optimize what matters

Mindset

A man in profile, looking towards a chalkboard filled with handwritten notes. The word "Mindset" is overlaid in large blue text on the left side of the image.

NOKIA

A photograph showing two people from behind, carrying a light green sofa on their shoulders. They are walking on a paved surface, possibly a parking lot, with a concrete curb and a green fence in the background. The scene is brightly lit, suggesting daytime.

Potential project directions

- Simple sharing
- Simple entertainment
- Simple games

Aalto / Pakistan

Low end phones and developing countries

Utilizing "normal" phones for
social uplift of people in
developing countries

“Normal” phones

- 4 billion mobile phones in world today
- Nearly 75% low end phones. e.g. Nokia Series 40
- Huge untapped market
- Simple UI, GPS enabled, camera, J2ME
- Users are financially middle and low class citizens

series//40
def 5

Problems in developing countries

- Low literacy rate
- Inefficient systems .e.g. governance, health, transport etc
- Lack of services
 - 1 doctor for 5000 persons in Pakistan
 - Agriculture-based economy, but, no proper mechanism to educate farmers, breeders, herd..
 - Primitive communication systems .e.g. Railways
 - Distance education mainly based on TV
- Health system in Pakistan
 - BHUs
 - LHV

Working with mGeos backend

- To learn about the existing platform – data gathering potentials
 - Data collection
 - Precise geo-mapping
- Possible developments beyond this:
 - Agriculture
 - Marking ownership of pre-existing spaces
 - Eg healthcare / health visitors
 - Information about patients
 - Health services
 - Documenting trends over periods of time
 - Eg parks and railways
 - Mapping tracks, train driver information
 - Scheduling
- No specific initial direction but as an open challenge
- No initial group definition but defined based on need/interest

It is **natural human behaviour** to be
interested in other people,
and work as a group,
bringing your own piece to complete **the**
puzzle
for **the benefit of all.**

Let people co-create

content, ideas, plans,
dreams and businesses

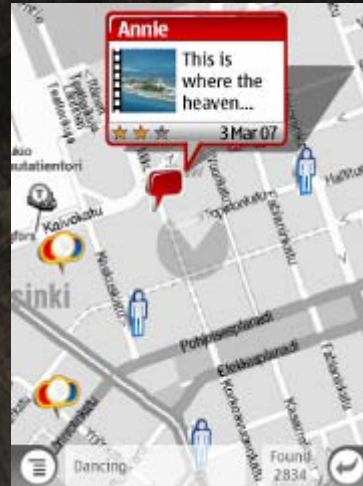

by providing
a people-centric,
one-stop electronic market place
of user-tailored trips
and local happenings,
with a novel and
sticky user experience.

Using proven mobile technology from Nokia as the building block
