

María del Carmen Rodríguez Martínez  
Universidad de Malaga

Profile: Occupational therapist, Assistant lecturer; has also studied History and Science of Music

Title: The New Technologies Used in Teaching Occupational Therapy´s Students at the University of Málaga

The aim is to show the different tools used in Occupational Therapy through Moodle at the University of Málaga: - Discussions - Wiki - Journal Class - Problem-based Learning - Questionnaire online - Interactive videos on topics of the subject - The web quest.

Also, I will show practical examples for every activity in a practical workshop proposal if you prefer. On the other hand, if you want that I explain aspects about health Science in my University. I could prepare a conference furthermore with the structure of my faculty. Perhaps it would be interesting for teacher and students from your university for having knowledge about our faculty.
