Älykalvo

Älykalvossa on kahden filmin sisälle laminoituja nanokoon kristallipolymeereja, jotka aktivoituvat heikko-virralla. Kalvo on ilman sähköä (OFF) maitolasimainen ja läpinäkymätön. Voimme tehdä älykalvosta myös eri värisiä versioita, kuten musta. Kun älykalvo aktivoidaan (ON) pienellä jännitteellä kristallit kääntyvät ja kalvosta tulee läpinäkyvä. Älykalvomme toimii sisällä ja ulkona

Älykalvon ominaisuudet lyhyesti

Tehokas näkösuoja ja laadukas projisointipinta

Kolmannen sukupolven tuote

Alhainen käyttöjännite (0V - 36V)

Loistavat valon diffuusio-ominaisuudet (ei hot-spotteja)

Laaja käyttölämpötila (-30 - + 80 -celsius asteessa)

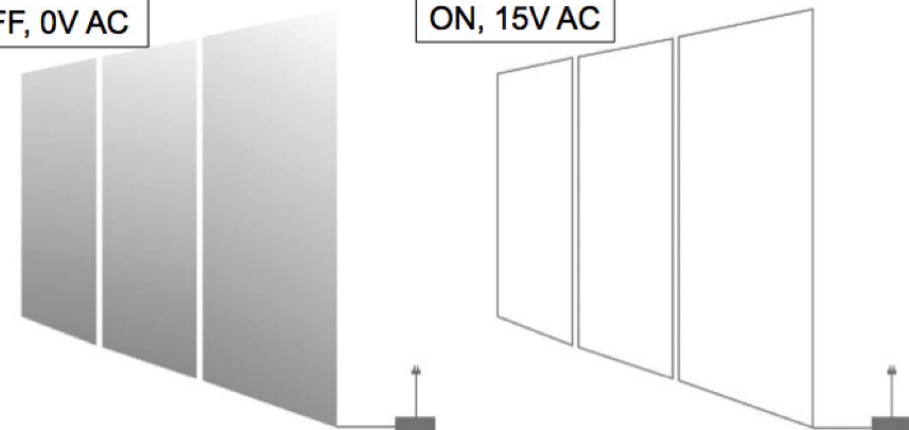

Korkea UV-suojaus (100% auringon UV- ja 70% infrapunasäteistä)

Pitkä käyttöikä (jopa 10-vuotta)
